Robert Pattinson is the Most Handsome Man Alive, According to Math

The newest Batman just beat out Superman Henry Cavill.

Spend any time in American mathematics education (or for English Robert Pattinson fans, "maths") and you'll eventually find a chapter with "Golden Ratios," a relation between two values existing only if the ratio of those two values equals the ratio of the sum of those values and the larger value. That by itself sounds confusing, right? Well, just know that it's being used for more than just numbers: Facial cosmetic surgeon Dr. Julian De Silva recently used a computerized mapping technique to assess celebrity faces, looking for matches with the Golden Ratio. The face that came closest to perfection was Mr. Pattinson's, which De Silva found to be a 92.15 percent match.
