

The Ancient Greeks had come up with a scientific way to measure the beauty of things around them. The golden ratio, or else "f" in Mathematics and Art, represents two quantities having a golden section ratio if the ratio of their sum to the greater quantity equals the ratio of the larger quantity to the smaller one. In simpler Greek, the magic number 1,618 is the key to **beauty**, the symbol of perfection.

A team of researchers led by surgeon Julian De Silva of the Center for Advanced Facial Cosmetic & Plastic Surgery in London has developed a software that measures female facial proportions based on gold incision. So, after proper measurements on the faces of the most famous actresses and models on the planet, they reached the golden five.
