Robert Pattinson's face is 92.15% perfect, science says

Perfection does not exist but Robert Pattinson approaches it. Her face at least. Who concludes this? Dr. Julian De Silva, a cosmetic surgeon who **regularly** analyzes different portions of celebrities' faces (shape of the face, forehead, nose, philtrum - located between the base of the nose and the upper lip), lips, chin, eye position ) before applying an equation based on the golden ratio - or Phi, (approximately 1.618): the closer we are to this ratio, the closer we are to perfection.

As he revealed last October, in women, it is the model Bella Hadid who, with a score of 94.35%, has a scientifically "almost" perfect face. Among men, its counterpart is Robert Pattinson: it has a rate of 92.15%. He is ahead of **Henry Cavill** (91.64%), **Bradley Cooper** (91.08%), Brad Pitt (90.51%), **George Clooney** (89.91%), Hugh Jackman (89.64%), David Beckham (88, 96%), **Idris Elba** (88.01%), Kanye West (87.94%) and Ryan Gosling (87.48%).
