A new technology shows what Meghan Markle, Prince Harry, Harry Styles and more will look like in their 60s. According to the Daily Mail;

"The software uses complex computer face mapping algorithms created by Harley Street facial cosmetic surgeon Dr Julian De Silva which can track subtle changes in the human face over five, ten, 20 years or even longer. Dr De Silva uses pictures of patients which are super-imposed over each other. The software picks up on key signs of ageing such as sagging skin around the eyes and predicts how much the face will change in the following years."

To take a look at the photos, you can click [HERE](#)! Seems pretty accurate!
