**Bow down to a powerful Timothée Chalamet in 'The King'**

**Jonah Hill in 'early' talks to play Batman villain opposite Robert Pattinson**

British actor Robert Pattinson has been dubbed the most handsome man on Earth by mathematical researchers.

They claim the 33-year-old "Twilight" hunk was blessed with the most "accurate" features per the Golden Ratio of Beauty Phi — an ancient formula designed by Greek mathematicians that is widely used to measure physical perfection.

His impeccable visage was also compared to those of other Hollywood stunners, including Brad Pitt, Idris Elba and David Beckham, yet his score of 92.15% couldn't be topped.

The list was compiled by plastic surgeon Dr. Julian De Silva, who used computerized mapping technology to calculate the ratios.

"Robert Pattinson was the clear winner when all elements of the face were measured for physical perfection," said De Silva, who runs the Centre for Advanced Facial Cosmetic & Plastic Surgery in London.

De Silva used the same theory to [crown model Bella Hadid the most beautiful woman in the world](#).

"These brand-new computer mapping techniques allow us to solve some of the mysteries of what it is that makes someone physically beautiful, and the technology is useful when planning patients' surgery," he added.

History's most well-known creators, such as Leonardo da Vinci, Salvador Dalí and Le Corbusier, employed the Golden Ratio to complete some of their masterpieces. Today, scientists also use the equation to demonstrate symmetry in nature provides a framework for conventional beauty.

In terms of good looks, the ratio is calculated by dividing the length of someone's face by the width. The closer that quotient comes to "phi" — 1.618 — the closer they are to perfection. The same steps are then applied to individual features of the face to determine their facial proportionality.

According to De Silva, Pattinson is "in the top five for nearly all categories because he has such classically shaped features and a wonderful, chiseled jaw," although his "thin and flat" lips didn't quite meet the mark.
