### Quick Overview

Symptom Oriented Otolaryngology—Head and Neck Surgery is based on this premise and is designed to provide the reader with the information necessary to proceed with a diagnostic evaluation and plan of management. The reader will benefit from the algorithms presented at the beginning of each chapter, which are supplemented with easy-to-read, well-illustrated text, which will be helpful in the management of their patients. The book is divided into three volumes: Head & Neck and Laryngology, Rhinology and Facial Plastics, and Otolaryngology and

## Key Features

---

- This book is a patient-based approach rather than a disease-based approach.
  - Covers all the presentations of a patient to an otolaryngologist- head and neck surgeon.
  - Divided into three volumes: Head & Neck and Laryngology, Rhinology and Facial Plastics, and Otology and Pediatrics.
  - These texts are designed to demonstrate how a specific presentation can be approached logically, a diagnosis reached where possible, and how common causes of that specific presentation may be treated.
  - Algorithms are presented at the beginning of each chapter, which are supplemented with easy-to-read, well-illustrated text, which will be helpful in the management of patient.
  - Each chapter has a 'Pearls and Pitfalls' section, and flowcharts have been used in the clinical chapters to depict a logical approach to a given presentation.
  - The contributing authors have been recruited from around the world.
  - Ideal for residents in training as well as young consultant otolaryngologists embarking on their specialist career.
  - It also provides an excellent resource for the more mature solo practitioner, who is in solo practice without the ready availability of the collegial support.
