Jodie Comer, winner of the Outstanding Lead Actress in a Drama Series award for Killing Eve

Jodie Comer has been branded "the most beautiful woman in the world" according to scientists.

The Golden Ratio of Beauty Phi, which apparently measures physical perfection, is a scientific calculation which depicts the most 'physically perfect' human beings. A list of beautiful celebs was compiled using mapping techniques by [Harley Street](#) facial cosmetic surgeon Dr Julian De Silva, who uses the technology in his work.

The idea behind the equation is that the closer the ratios of a face or body are to the number 1.618 (Phi), the more beautiful they become. The 29-year old [Killing Eve actress](#) had her eyes, eyebrows, nose, lips, chin, jaw and facial shape all taken into consideration with them found to be 94.52% accurate. Her facial features were just 1.3% away from being the perfect shape.

The doctor said: " [Jodie Comer](#) was the clear winner when all elements of the face were measured for physical perfection. She had the highest overall reading for the positioning of her nose and lips, with a score of 98.7%, which is only 1.3% away from being the perfect shape.

"Jodie also had the highest score for her nose width and length and she was near the top for the shape of her lips and the position of her eyes. Her chin is beautifully shaped and her overall face shape is really strong. The only element she was marked down for was her eyebrows which achieved an average score of 88%."

On the list, Zendaya was a close second and easily topped the scores for lips with a mark of 99.5% and her forehead at 98%. Bella Hadid was third, achieving top score for her eye position and her chin.

And Beyoncé came in fourth place. She scored the highest marks for the shape of her face (99.6%) and getting very high scores for her eyes, brow area and lips.
